The biology department wishes to change the course number for the Scientific Writing course to an upper-division number. Students have said that they will not sign up for this elective course unless it counts toward their upper-division biology electives. The faculty thought this was a valid request as this is a writing intensive course geared toward training students to write, read, and comprehend primary scientific literature.

### Prerequisite Change

The corequisite for BIOL 4415: Mammalogy Lab is listed as BIOL 4410 (which doesn't exist).

**List the corequisite for BIOL 4415: Mammalogy Lab as BIOL 4411: Mammalogy.**

This change will clear up the frustration students have had when they try to register for this course on-line and the computer "kicks them out" of the process.

### Prerequisite Error in Catalog

Last year, CHEM 2310: Organic Chemistry I was removed as a prerequisite for BIOL 3450/3455: General Microbiology.

**Reinstate CHEM 2310 as a prerequisite for BIOL 3450/3455: General Microbiology.**

Don Warner states that without the organic chemistry background, his students are having a difficult time understanding the cellular and microbial chemistry that is covered in the class.
